TIERAXIS

2026 OKLAHOMA TECHNOLOGY OPPORTUNITY REPORT

What Oklahoma organizations are preparing to fund, build, buy and sell.

DESIGN DIRECTION 01

02 INSIDE THE OPPORTUNITY

INSIDE THE OPPORTUNITY

Oklahoma's technology economy is becoming more visible through infrastructure, commercialization funding, company expansion, financing and measurable operating outcomes.

03 A Market in Motion

04 The Initiative Is the Unit of Analysis

05 Oklahoma by the Numbers

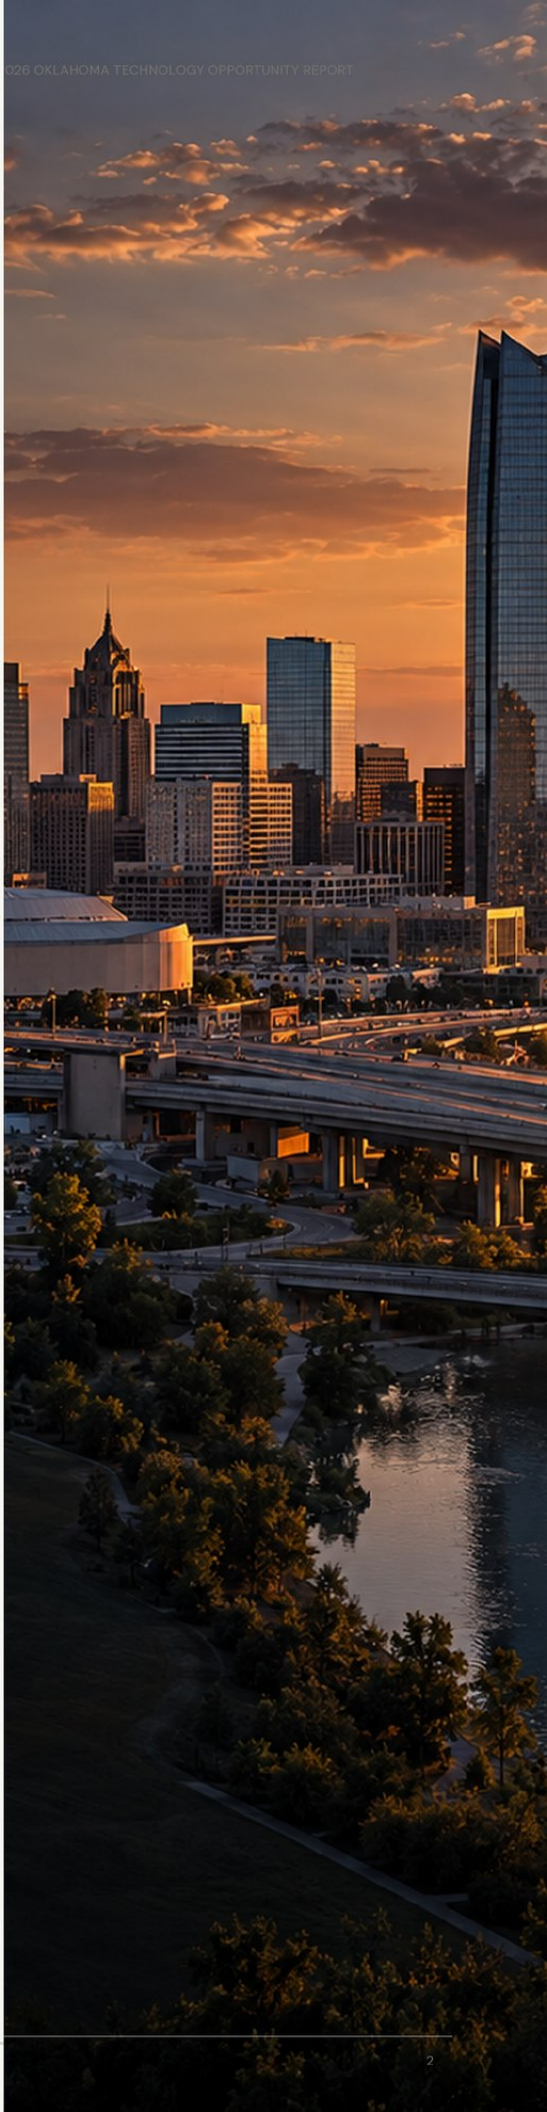

06 Where Momentum Is Visible

07 Applied AI Moves Into Real Workflows

08 Company in Motion: Apricot Health

09 Three Opportunity Systems

10 The TierAxis Opportunity Index

THE QUESTION BEHIND THE REPORT

What does current public evidence reveal about the investments, companies and operating systems shaping Oklahoma's technology economy?

03 EXECUTIVE VIEW

A MARKET IN MOTION

The activity is visible. The larger opportunity is emerging across infrastructure, commercialization, company formation and deployment.

Google announced an additional $9 billion investment in Oklahoma over two years for cloud and AI infrastructure. The U.S. Economic Development Administration awarded approximately $51 million to the Tulsa Hub for six autonomous-systems implementation projects. [S1-S3]

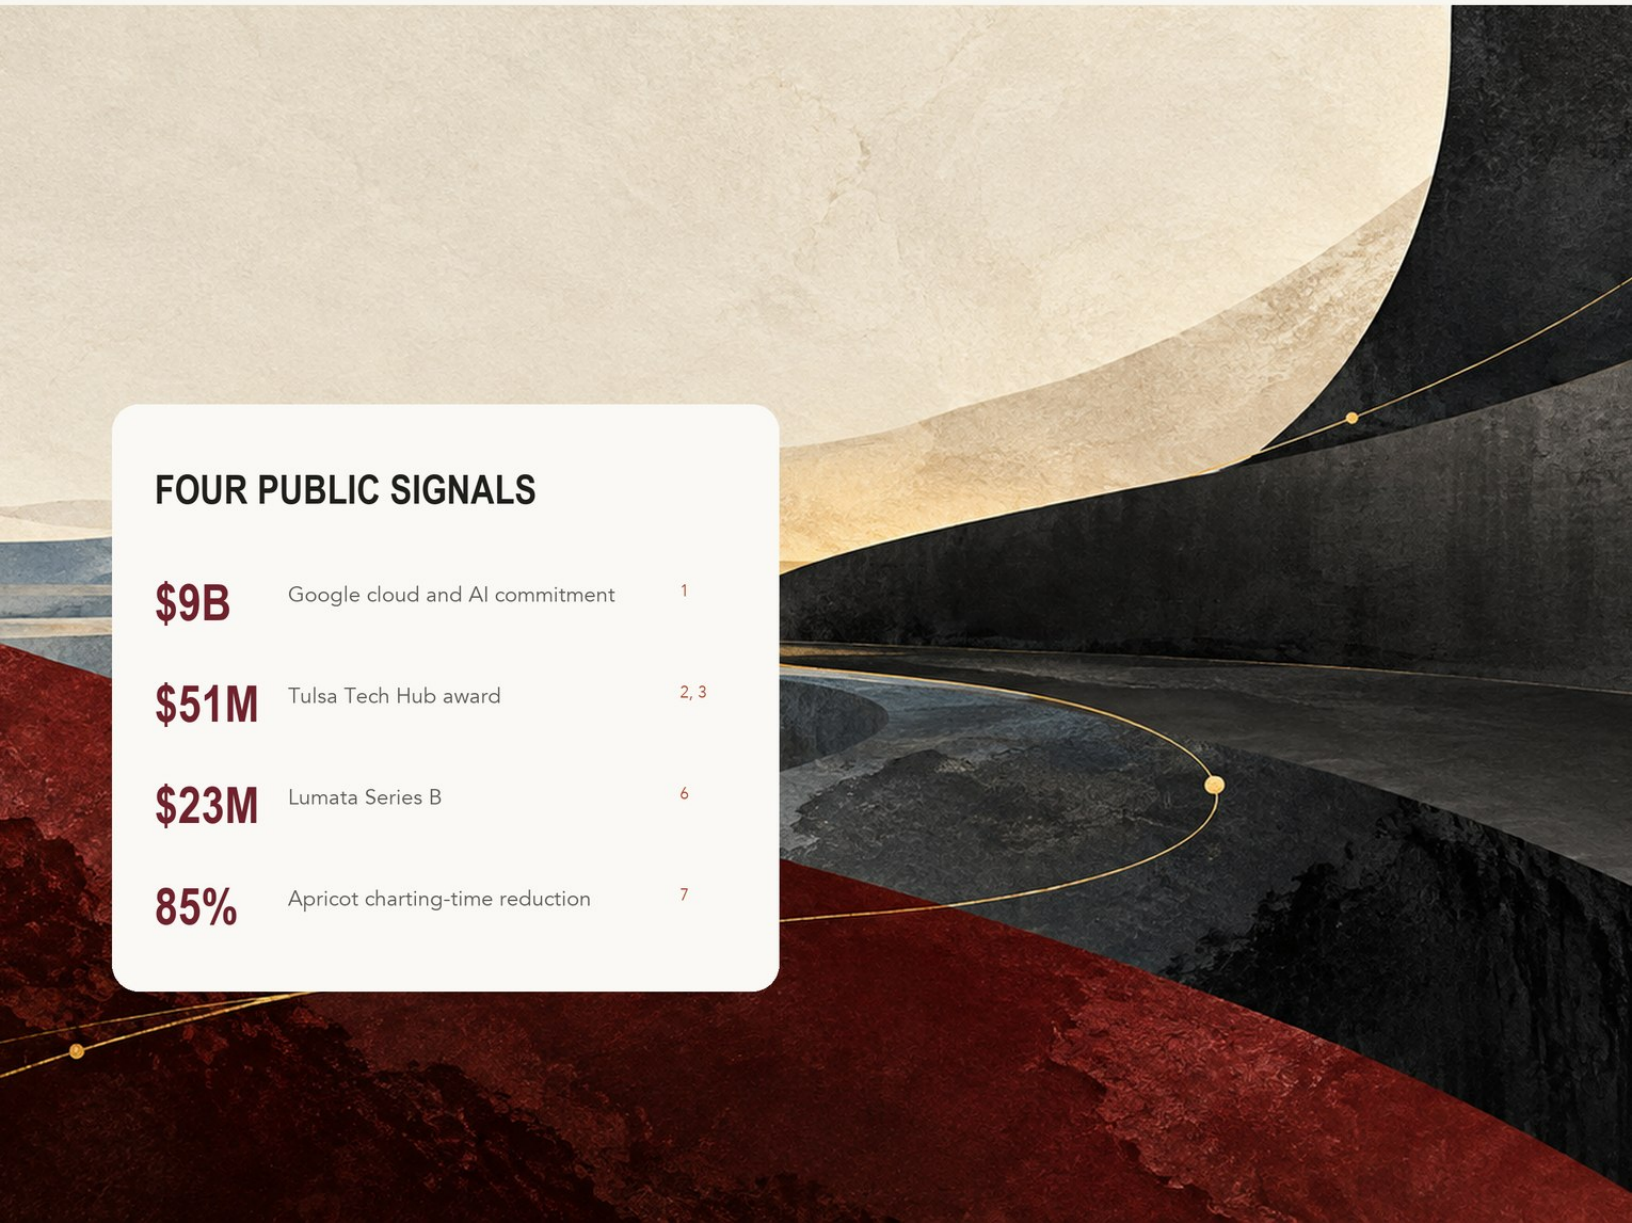

Lumata Health announced a $23 million Series B. Apricot Health published a customer case reporting an 85 percent reduction in documentation time. Manna selected Tulsa for its first full-scale metropolitan U.S. operation. [S5-S7]

These signals are not directly comparable and should not be added together. They represent infrastructure investment, federal implementation funding, institutional financing, a company expansion plan and a company-reported customer result.

Together, they show that Oklahoma's technology story extends beyond startup formation alone.

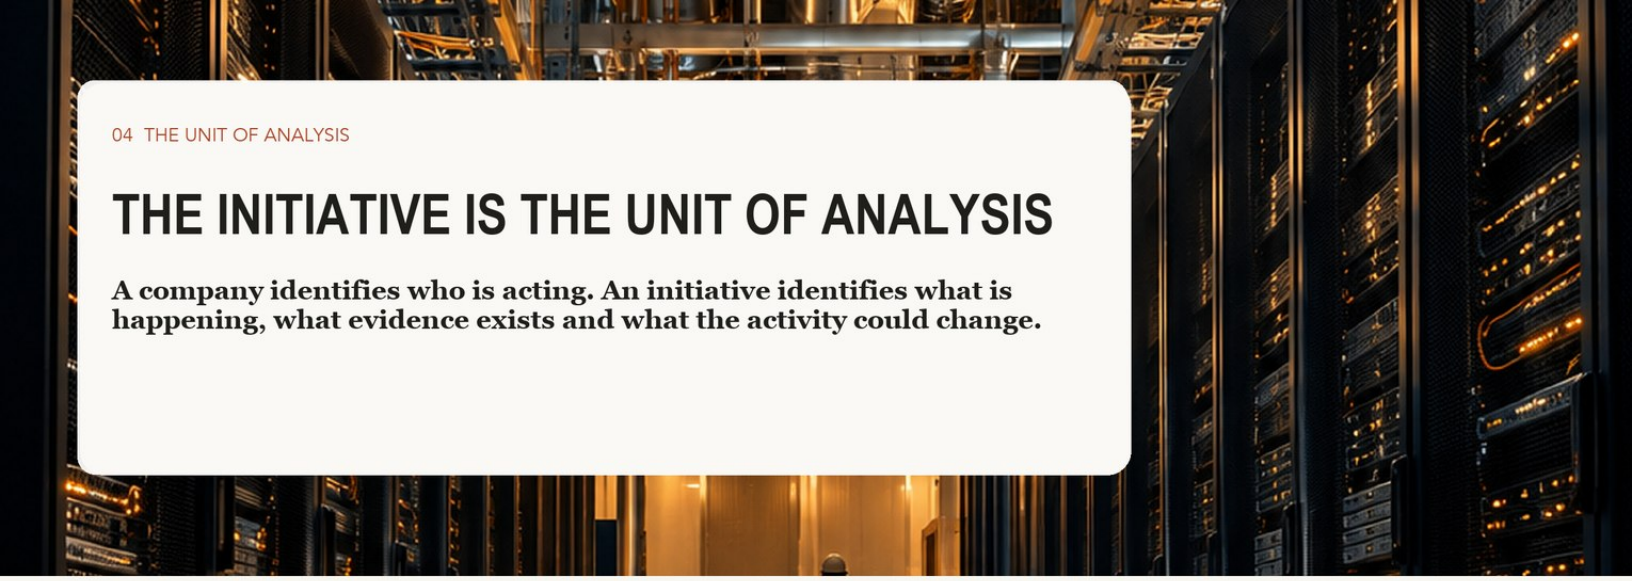

TIERAXIS ANALYSIS

The common pattern is the conversion of specialized capability into infrastructure, financed growth, commercial operations or measurable customer value.

FOUR PUBLIC SIGNALS

$9B	Google cloud and AI commitment	1
$51M	Tulsa Tech Hub award	2, 3
$23M	Lumata Series B	6
85%	Apricot charting-time reduction	7

THE INITIATIVE IS THE UNIT OF ANALYSIS

A company identifies who is acting. An initiative identifies what is happening, what evidence exists and what the activity could change.

Company counts remain useful, but they do not capture the full range of activity documented here. Google's commitment is infrastructure. The Tulsa Tech Hub is a commercialization initiative. Lumata's financing supports expansion. Manna combines operations, employment expectations and manufacturing. Apricot documents a result inside a defined workflow. [S1, S2, S5-S7]

READ EVERY INITIATIVE THROUGH FOUR QUESTIONS

01 WHAT HAPPENED?

Identify the investment, award, financing event, expansion decision or deployment result.

02 WHO REPORTED IT?

Distinguish government awards, company announcements and customer case studies.

03 WHAT IS THE EVIDENCE TYPE?

Separate announced investment, awarded funding, forecasts and reported outcomes.

04 WHY DOES IT MATTER?

Explain operating significance without inventing unsupported local value.

TIERAXIS ANALYSIS

This method allows infrastructure, commercialization programs, company financing and operating outcomes to appear in the same report while preserving the differences between them.

05 STATEWIDE SIGNALS

OKLAHOMA BY THE NUMBERS

The figures describe different forms of visible momentum. They are not a single market total.

$9B — **CLOUD + AI INFRASTRUCTURE**

Google announced additional investment over two years, including a Stillwater campus, Pryor expansion and workforce programs. [S1]

$51M — **AUTONOMOUS-SYSTEMS FUNDING**

Federal implementation funding supports six Tulsa Tech Hub projects. [S2, S3]

$23M — **DIGITAL-HEALTH FINANCING**

Lumata announced its Series B to expand access and adherence to chronic eye care. [S6]

85% — **DOCUMENTATION-TIME REDUCTION**

Apricot reports a Choice Health at Home workflow falling from about three hours to 20-30 minutes. [S7]

WHAT THE FIGURES ESTABLISH

- Computing infrastructure is expanding.
- Federal funding supports commercialization.
- An Edmond health company raised institutional capital.
- An Oklahoma applied-AI company reports a measurable deployment result.

WHAT THE FIGURES DO NOT ESTABLISH

They cannot be summed into a statewide technology-opportunity value. This edition does not estimate unannounced procurement, local supplier revenue, total company valuation or the value of a qualified opportunity pipeline.

06 SECTOR VIEW

WHERE MOMENTUM IS VISIBLE

Current primary sources document investment, commercialization activity, financing or operating results in five connected areas.

CLOUD + AI INFRASTRUCTURE

Google: $9B plus an OG&E energy agreement.

Capacity creates demand for power, construction, cooling, networks and labor. [S1, S8]

AUTONOMOUS SYSTEMS

Tulsa Tech Hub, FlightHorizon and Manna.

Public funding, test infrastructure and a commercial operator now coexist. [S2, S4, S5]

DIGITAL HEALTH

Lumata Health: $23M Series B.

Institutional financing supports an Edmond company serving payers and health systems. [S6, S12]

APPLIED AI

Apricot: a defined customer workflow.

The case ties AI to specific time and productivity measures. [S7]

RESEARCH COMMERCIALIZATION

OU: 500+ innovations, 350 patents, $23M returned.

These are university program results, not statewide totals. [S9]

HOW THE AREAS CONNECT

Infrastructure supports computing. Autonomous systems combine research, testing, manufacturing and operations. Health and AI companies depend on customers and implementation capability.

TIERAXIS ANALYSIS

The opportunity is not the label. It is the relationship among infrastructure, operating knowledge, customer demand, capital and commercialization pathways.

APPLIED AI MOVES INTO REAL WORKFLOWS

Apricot's published case study identifies a workflow, customer context, baseline and reported result.

Apricot describes pre-visit patient intelligence, clinician-controlled in-home data capture, a post-visit interview and in-app review before documentation reaches the agency's record system. [S13]

At Choice Health at Home, Apricot reports that Start of Care documentation for the clinician profiled fell from approximately three hours to 20-30 minutes. [S7]

The same case reports twice the Start of Care assessments and a 40 percent increase in QA productivity. These are company-reported results from a specific deployment. They are not independently validated results for every customer or statewide healthcare outcomes. [S7]

WHAT CREDIBLE WORKFLOW EVIDENCE CONTAINS

01 A defined operating problem

02 A named user or customer environment

03 A baseline before implementation

04 A measurable post-implementation result

05 Clear attribution for who reported it

06 Context that prevents overgeneralization

TIERAXIS ANALYSIS

The broader Oklahoma opportunity is not artificial intelligence in the abstract. It is applying technology to workflows where the state already has operating knowledge, customers and implementation capability.

08 COMPANY IN MOTION

APRICOT HEALTH

An Oklahoma-based company applying artificial intelligence to a measurable home-health documentation workflow.

Apricot was created to reduce the documentation burden experienced by home-health clinicians. The company describes an AI documentation platform supporting clinical data capture, coding, quality assurance and preparation for agency record systems. [S13, S14]

Its Choice Health at Home case study reports documentation falling from approximately three hours to 20-30 minutes, an 85 percent reduction, a 40 percent increase in QA productivity and twice the Start of Care assessments per clinician. [S7]

These are company-reported customer outcomes from a specific deployment, not independent clinical findings or results that should be generalized to every agency.

WHY THE EVIDENCE MATTERS

- DEFINED WORKFLOW
  Home-health documentation
- VISIBLE BASELINE
  About three hours before implementation
- MEASURED RESULT
  20-30 minutes for the clinician profiled
- ATTRIBUTED SOURCE
  Apricot and Choice Health at Home

DEPLOYMENT EVIDENCE

85%	Less documentation time
40%	More QA productivity
2x	Start of Care assessments per clinician

SOURCE

Apricot Health, Choice Health at Home case study. Company-reported outcomes. [S7]

TIERAXIS ANALYSIS

Apricot shows Oklahoma operating knowledge becoming a software product for a national healthcare market.

Sources: apricothealth.ai/documentation; Choice Health at Home case study. Outcomes are company-reported.

THREE OPPORTUNITY SYSTEMS

Three different ways technology activity is taking shape in Oklahoma.

01 APPLIED AI IN HOME HEALTH

CONFIRMED: Apricot reports measurable results in a defined Choice Health workflow. [S7]

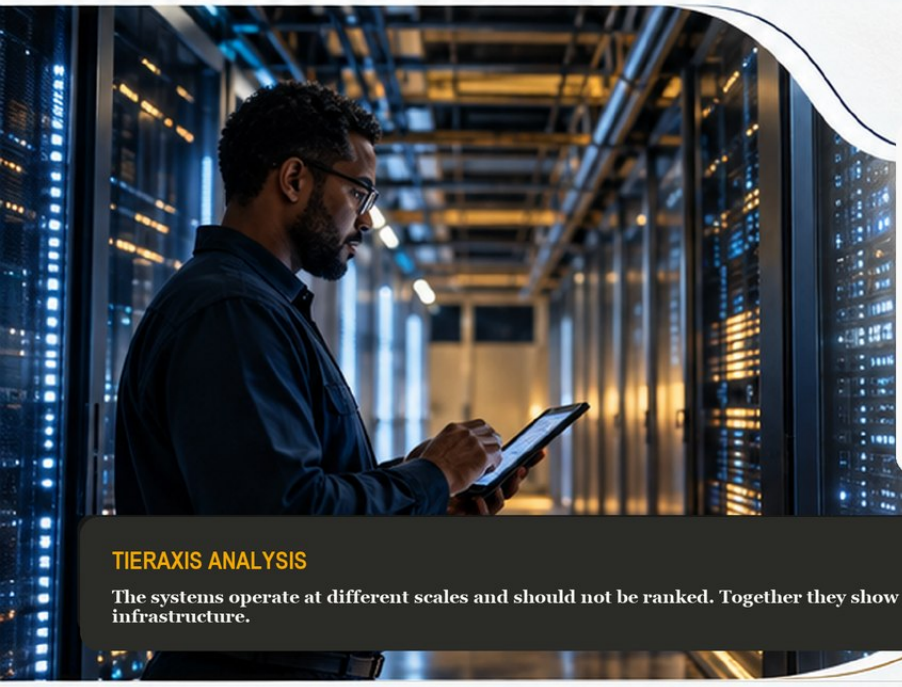

INTERPRETATION: Oklahoma operating experience can become repeatable software and customer value.

02 AUTONOMOUS-SYSTEMS COMMERCIALIZATION

CONFIRMED: Federal funding, FlightHorizon infrastructure and Manna operations are documented. [S2-S5]

INTERPRETATION: Funding, testing infrastructure and a commercial operator exist in one system.

03 CLOUD + AI INFRASTRUCTURE

CONFIRMED: Google announced $9B in new and expanded data-center capacity plus an OG&E agreement. [S1, S8]

INTERPRETATION: Scale depends on power, workforce and long-term operations.

TIERAXIS ANALYSIS

The systems operate at different scales and should not be ranked. Together they show software products, operating platforms and physical infrastructure.

10 THE OPERATING ASSET

THE TIERAXIS OPPORTUNITY INDEX

A transparent public baseline of selected Oklahoma technology signals documented in this edition.

SCOPE + METHOD

Included signals have a specific Oklahoma connection, a dated primary source, a named organization and evidence of investment, awarded funding, financing, an operating decision or a company-reported deployment result. The baseline does not score readiness or estimate unannounced value.

PUBLIC SIGNAL REGISTER

01 **GOOGLE CLOUD + AI INFRASTRUCTURE**

$9B announced investment over two years

Corporate investment announcement | Aug. 13, 2025 | Source 1

02 **TULSA HUB FOR EQUITABLE + TRUSTWORTHY AUTONOMY**

$51M supporting six implementation projects

Federal implementation award | July 2, 2024 | Sources 2, 3

03 **MANNA TULSA EXPANSION**

First full-scale metro U.S. operation and planned U.S. manufacturing base

Company announcement and forecast | July 8, 2026 | Source 5

04 **LUMATA HEALTH FINANCING**

$23M Series B for expanded access and adherence to chronic eye care

Institutional financing announcement | Mar. 7, 2025 | Source 6

05 **APRICOT HEALTH CUSTOMER DEPLOYMENT**

85% less documentation time, 40% greater QA productivity and 2x Start of Care assessments

Company-reported customer outcome | Active since 2024 | Source 7

HOW TO USE THE INDEX

Read each signal through its evidence type and source. Company forecasts and customer outcomes remain attributed to the organization that reported them.

11 SOURCES + METHODOLOGY

PUBLIC SOURCES

Material facts are tied to dated primary sources. Company outcomes and forecasts remain attributed to the organizations that reported them.

METHOD

This edition uses publicly available primary sources and separates announced investments, awarded funding, company forecasts, company-reported customer outcomes and TierAxis interpretation. It is not a complete census or a verified pipeline of unannounced opportunities.
